

As part of my second opinion I'd like to make sure my biopsy results belong exclusively to me.

Strand Diagnostics has developed a test that will compare the profiles of my DNA (taken via cheek swab at your office) to the DNA of the positive biopsy specimen(s) used in my diagnosis to confirm the biopsy diagnosis is exclusively mine.

This test brings a higher level of diagnostic accuracy to the biopsy process and reduces provenance errors which can occur and are beyond your control. DNA Specimen Provenance Assay (DSPA), the Know Error test, is used to definitively assign specimen identity when making the diagnosis of cancer and other histopathological conditions.

By matching the DNA profiles, we are confirming that my second opinion biopsy results belong exclusively to me.

Hundreds of physicians are using the **know error® system** and if it is not part of your standard care, please contact Strand Diagnostics' client services at 1-888-924-6779, option 2 for information on obtaining a kit with a requisition for DNA Specimen Provenance Assay (DSPA) for biopsy tissues.

I'd like us to Be DNA Certain™ my biopsy results belong to me.

For more information on the **know error® system** please visit www.knowerror.com or call us directly at 1-888-924-6779, option 2.
